**VIAGRA**

VIAGRA (sildenafil) is the first **oral** treatment for erectile dysfunction (impotence) to be licenced in the UK. This fact sheet provides basic information on VIAGRA; for more detailed information you should consult your doctor.

**What is VIAGRA?** VIAGRA belongs to a group of medicines called phosphodiesterase type 5 inhibitors. It is a blue, diamond shaped, oral tablet prescribed to treat men suffering from clinical erectile dysfunction. **It is not an aphrodisiac and does not increase libido.** VIAGRA works in a natural way, so sexual stimulation will be required.

**How does VIAGRA work?** VIAGRA works by helping to relax the blood vessels in the penis, allowing blood to flow into the penis causing an erection. However, VIAGRA works naturally and will only help a man to get an erection if he is sexually stimulated. It should not be taken by men who do not have erectile dysfunction.
